Declaration of Product Information in Compliance with EU 1253/2014, Relating to NRVU, BVU and UVU configured Devices

In the case of Non-Residential Ventilation Units (NRVU) that are configured and selected to a specific design point, the assessment of conformity with Regulation (EU) 1253/2014 and the provision of product information are made by Fläkt Woods in relation to the specific flow rate intended for the specific project.

This applies to both Unidirectional Ventilation Units (UVU) and Bidirectional Ventilation Units (BVU), Air Handling Units used in buildings for supply, exhaust or recirculation.

According to the definition in Annex 1, 2 (2) the fan efficiency is determined at the design air flow and total pressure of the unit.

Products that are produced by Fläkt Woods for specific purpose are selected in our software, Acon, for that particular duty.

Fläkt Woods' product information is declared in relation to the specific conditions that the selection of the unit was based on.
